Education

University of British Columbia

Bachelor of Science (Computer Science)

Vancouver, BC

Expected Graduation: 2028

Awards: Trek Excellence Scholarship (Top 5% GPA in undergraduate year), Dean's Scholar

Technical Skills

Programming Languages: JavaScript/TypeScript, Python, C#, C/C++, Java, SQL, HTML/CSS

Full-Stack Development: React, React Native, Node.js, .NET, REST API, Web Sockets, Supabase

Technologies: Git/GitHub, PostgreSQL, AWS, GCP, Docker, Jenkins, Jira

Experience

Software Developer Intern

Optum

Vancouver, BC

January 2026 – Present

- Collaborated in an Agile team using **daily scrums, sprint planning, and Jira**, contributing to the development and delivery of enterprise-scale applications in a fast-paced environment
- Worked across the stack (**React, Node.js, .NET**) to debug production issues, implement fixes, and improve system reliability, ensuring secure and maintainable code in a large-scale system
- Performed manual and automated testing, and supported cloud-based workflows on **Google Cloud Platform (GCP)** to maintain system stability and ensure smooth production deployments

Software Developer

Motion UBC

Vancouver, BC

November 2025 – Present

- Developed a bottle pickup logistics platform using **React and React Native**, enabling efficient coordination between users and organizers while enhancing usability through iterative UI improvements
- Designed and implemented backend services and database integration using **Supabase**, supporting real-time data management and streamlining the pickup workflow through continuous feature development

Software Developer

UBC Data Science Club

Vancouver, BC

Octobers 2025 – Present

- Built and maintained the club's main website using **React**, improving accessibility and performance while collaborating with cross-functional teams to deliver new features and maintain a cohesive user experience
- Translated design mockups into responsive UI components, ensuring consistency with design specifications and contributing to a polished, user-friendly interface across the site

Projects

CheatCode — React, Web Sockets

March 2026

- Developed a live, room-based coding platform using **React and WebSockets**, enabling real-time multiplayer interaction, synchronized gameplay, and seamless collaboration between users
- Built a scalable backend using **Python**, containerized with **Docker**, handling session management, real-time communication, and concurrent users while ensuring reliability and efficient performance under load
- Deployed the application using **Vercel and Render**, configuring production environments and ensuring reliable hosting, uptime, and seamless user access

Maze Generation and Solving Visualization Tool — C++, Raylib

March 2026

- Engineered an interactive algorithm visualization tool in **C++ using Raylib**, demonstrating maze generation and pathfinding through a graphical interface that animates execution for improved clarity and user understanding
- Implemented multiple generation and search algorithms (e.g., DFS, BFS, A*), enabling real-time visual comparison of approaches while designing intuitive visualizations to highlight algorithm behavior and performance differences

Leadership

Mentor

You Can Ride 2

Edmonton, AB

March 2023 - April 2023

- Volunteered as a **mentor** in a six-week program, assisting children with mental challenges and disabilities in building the skills and confidence to ride a bike independently
